Running the Microsoft Copilot Studio workshop ..... ***Error! Bookmark not defined.***

Terms of Use *11*

Requirements

Below are the required components and options to run the Microsoft Copilot Studio workshop.
Note: if you're creating a new tenant for the training, you may skip that part.

CATEGORY	DETAILS
LICENSES	Unless you already have adequate licenses for Copilot Studio and Power Automate, workshop student can be assigned the below trial licenses: • Microsoft Copilot Studio Viral Trial • Microsoft Power Automate Free The viral trial licenses start showing up for the Microsoft 365 admin when at least one user has started a viral trial, by logging into: • https://copilotstudio.microsoft.com/ • https://make.powerautomate.com/
POWER PLATFORM ADMIN CENTER TENANT SETTINGS	In the Power Platform Admin Center tenant settings (https://admin.powerplatform.microsoft.com/tenantsettings), make sure **Publish Copilots with AI features** is enabled. POWER PLATFORM DLP POLICIES	Make sure the **connectors** you wish to use during the workshop are not blocked by a Data Loss Prevention policy in the Power Platform environment you wish to use for the training: https://admin.powerplatform.microsoft.com/dlp Learn more: Manage data policies The below connectors are needed to perform the labs: • Microsoft Dataverse • MSN Weather • ServiceNow • HTTP • Chat without Microsoft Entra ID authentication in Copilot Studio • Direct Line channels in Copilot Studio

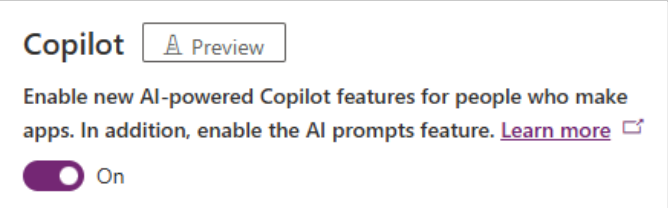
© 2024 Microsoft Corporation. All rights reserved.

- Knowledge source with SharePoint and OneDrive in Copilot Studio
- Knowledge source with public websites and data in Copilot Studio
- Knowledge source with documents in Copilot Studio

For **custom connectors**, add the https://restcountries.com pattern.

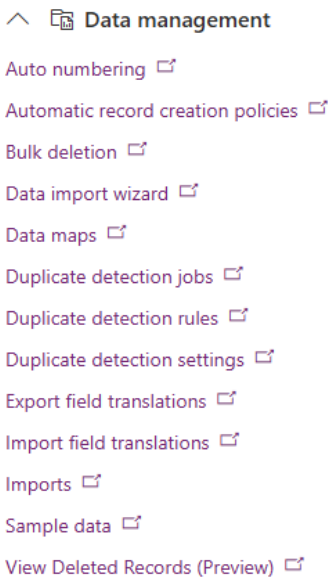
ENVIRONMENT CONFIGURATION	Make sure you use an environment where a **Dataverse data store** is enabled, as this is required by Copilot Studio: https://admin.powerplatform.microsoft.com/environments You should also make sure that the environment **Region** is supported by Copilot Studio: Regional settings and data locations It's best to do the training on a **dedicated** environment. If you're using a test/trial tenant, this can be the **Default** environment.
ENVIRONMENT SETTINGS	In your environment settings (Power Platform Admin Center > Environment > Settings), go to **Product** > **Features**, and make sure **Copilot (preview)** is enabled to be able on invoke AI Builder prompts: https://admin.powerplatform.microsoft.com/environments More information: Manage feature settings.

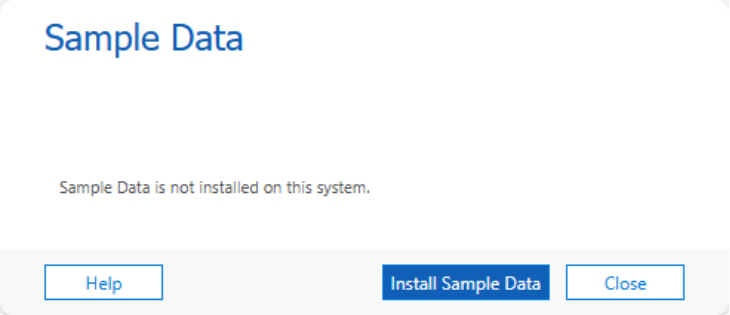
© 2024 Microsoft Corporation. All rights reserved.



SAMPLE DATA

In your environment settings (Power Platform Admin Center > Environment > Settings), go to **Data Management** > **Sample Data**, and select **Install Sample Data**:
Note: make sure your user has the System Administrator role, otherwise the option will be greyed out.
More information: Add or remove sample data.





WORKSHOP SOLUTION

Some labs need read access to records in the Dataverse **Account** and **Contact** tables as well access to a **custom connector**. These can be imported.

1. Go to https://make.powerapps.com/
2. Navigate to **Solutions**
3. Select **Import solution**
4. Choose **Browse** and select CopilotStudioWorkshop_1_0_0_x_managed.zip
5. **Select** next and **Import**.

© 2024 Microsoft Corporation. All rights reserved.

SECURITY ROLE ASSIGNMENT TO USERS	In your environment settings (Power Platform Admin Center > Environment), under **Access** go to **Teams**, and select the one with the same name as the default business unit (e.g. org9cde1a8b). *Note: unless you've setup a business unit hierarchy and dispatched users in them, this team should contain all users of your environment.* Select **Manage security roles**, and choose the role **Accounts and Contacts data (Read All)**, and **Save**.
SERVICENOW ENVIRONMENT	A **ServiceNow** environment with access to sample **incidents** is required for lab 3.
SHAREPOINT	A **SharePoint site** were sample files are deployed for the lab 5. Users should have read access to the documents.

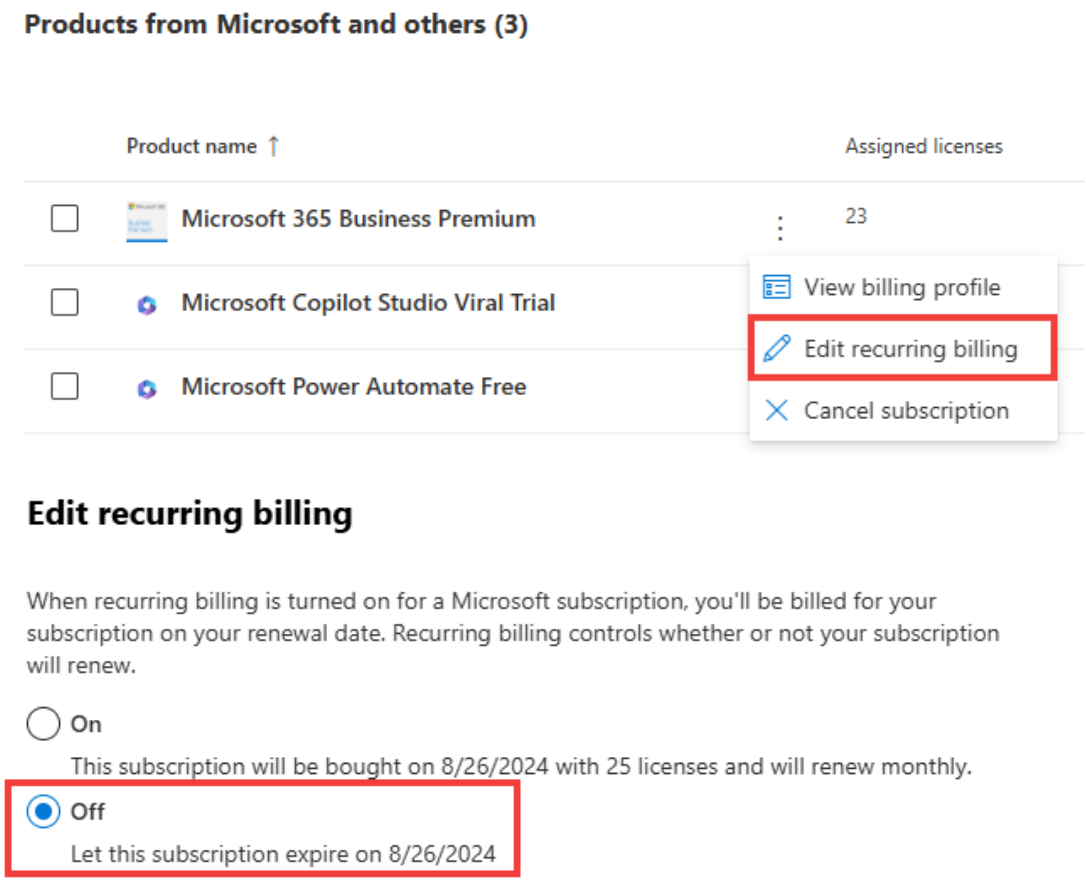
Setting up everything from scratch

Set up a new tenant

A tenant represents an organization. It's a dedicated instance of Microsoft Entra ID that an organization or app developer receives at the beginning of a relationship with Microsoft. That relationship could start with signing up for Azure, Microsoft Intune, or Microsoft 365, for example.

- If you don't have a tenant, or don't want to use an existing one:
  - Open the below link in a new work profile (or as a guest, or InPrivate).
  - Start a trial of Microsoft 365, for example Microsoft 365 Business Premium.
  - When entering your professional email address, select "Create a new account instead" and not Sign In.
- To avoid charges to your credit card, **turn off recurring billing** so that it doesn't convert into a paid subscription in the Microsoft 365 admin center: https://admin.microsoft.com/Adminportal/Home?#/subscriptions



© 2024 Microsoft Corporation. All rights reserved.

Disable security default (optional)

If you don't want users to be prompted to configure multi-factor authentication when they sign in the first time, you need to disable security defaults in Microsoft Entra ID. Learn more: Providing a default level of security in Microsoft Entra ID.

1. Sign in to the Microsoft Entra admin center as at least a Security Administrator.
2. Browse to **Identity** > **Overview** > **Properties**.
3. Select **Manage security defaults**.
4. Set **Security defaults** to **Disabled (not recommended)**.
5. Select **Save**.

Start Copilot Studio and Power Automate trials

Workshop students need to be assigned the below trial licenses:

- **Microsoft Copilot Studio Viral Trial**
- **Microsoft Power Automate Free**

The **viral trial licenses** will only start showing up in the Microsoft 365 admin center (https://admin.microsoft.com/) when at least one user has started a viral trial.

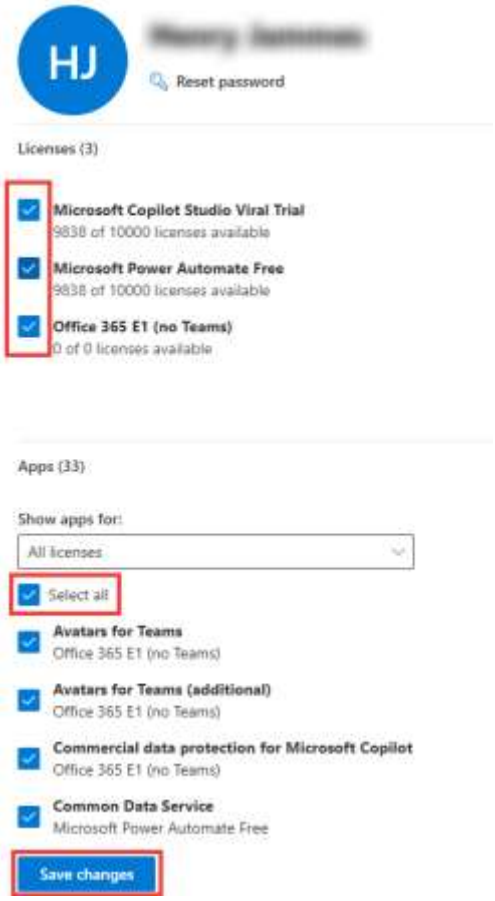
1. **Navigate** and **log in** to: https://copilotstudio.microsoft.com/
2. **Navigate** and **log in** to: https://make.powerautomate.com/

Assign licenses to your user

Make sure your user has all licenses and apps assigned to them.

1. **Navigate** to https://admin.microsoft.com/#/users
2. **Select** your user
3. Go to **Licenses and apps**
4. Select **all licenses** and **all apps**
5. **Save changes**

© 2024 Microsoft Corporation. All rights reserved.



r

Create fictitious users

When you're using a trial tenant and your users don't already have user accounts, you can bulk create student accounts. Learn more here: Add several users at the same time to Microsoft 365.

1. Open 150 sample users.csv with **Notepad**.
2. Do a **search** and **replace** to replace @copilotstudiotraining.onmicrosoft.com with your own **domain**.
3. **Save** the CSV file.
4. **Navigate** to https://admin.microsoft.com/Adminportal/Home?#/addmultipleusers
5. Select **I'd like to upload a CSV with user information**
6. **Upload** the CSV file, and select **Next**.
7. Add the **required licenses**, and select **Next**.
   - **Microsoft Copilot Studio Viral Trial**
   - **Microsoft Power Automate Free**
8. **Download user details**.
9. Copy content from the **Username** and **Password** columns from users.csv into User credentials.xlsx.
10. **Print** and **cut** User credentials.xlsx so that workshop attendees have credentials they can use for the labs.

© 2024 Microsoft Corporation. All rights reserved.

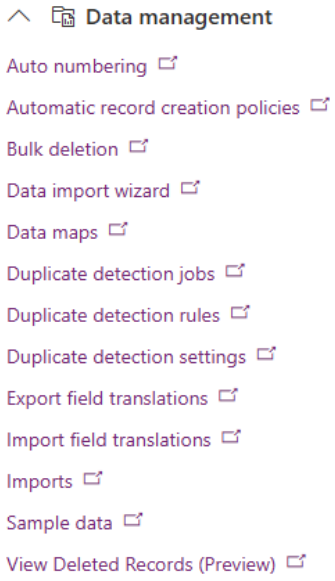
Promote yourself System Administrator on the default environment

Even though you're Global Administrator at the tenant level, you need to be System Administrator at the environment level to perform some of the setup actions and to be able to assist students during the lab, for example by seeing and editing their copilots:

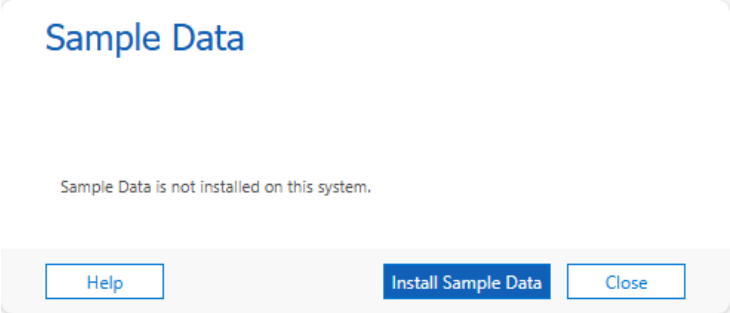
1. **Navigate** to https://admin.powerplatform.microsoft.com/environments
2. **Select** the default environment
3. Note: if Dataverse isn't enable, **add Dataverse** to the environment
4. Select **Open**
5. In the new tab that opens, select the **Gear** icon at the topic right and choose **Advanced Settings**.
6. Expand **Settings** and go to **Security**.
7. Select **Users**.
8. **Search** for your user
9. **Select** your user, and choose **PROMOTE TO ADMIN**, then select OK.
10. **Close** that tab.

Add sample data

In your environment settings (Power Platform Admin Center > Environment > Settings), go to **Data Management** > **Sample Data**, and select **Install Sample Data**.
More information: Add or remove sample data.



© 2024 Microsoft Corporation. All rights reserved.



Import the workshop solution

Some labs need read access to records in the Dataverse **Account** table as well access to a **custom connector**. These can be imported with a solution file.

1. Go to https://make.powerapps.com/
2. Navigate to **Solutions**
3. Select **Import solution**
4. Choose **Browse** and select CopilotStudioWorkshop_1_0_0_x_managed.zip
5. **Select** next and **Import**.

Assign the "Accounts and Contacts data (Read All)" security role to users

1. In your environment settings (Power Platform Admin Center > Environment)
2. Under **Access** go to **Teams**,
3. **Select** the team with the same name as the default business unit (e.g. org9cde1a8b).
   Note: unless you've setup a business unit hierarchy and dispatched users in them, this team should contain all users of your environment.
4. Select **Manage security roles**
5. Choose the role **Accounts and Contacts data (Read All)**
6. **Save**.

Setup a SharePoint site

1. **Navigate** to https://copilotstudiotraining.sharepoint.com/
   *Note: update **copilotstudiotraining** with your own domain.*
2. **Navigate** to documents (created a new site if needed)
3. **Upload** the files contained in **Sample files**
4. **Update** lab 5 instructions for the SharePoint URL to be used.

Setup a ServiceNow instance

Get a ServiceNow developer account

1. **Navigate** to ___

© 2024 Microsoft Corporation. All rights reserved.

2. Choose **Sign up and Start Building**
3. **Fill** out the form and select **Sign Up**
4. **Validate** your email address by **opening** the link sent to you.

Log into the ServiceNow developer portal

1. Once logged in to https://developer.servicenow.com/dev.do#!/home
   Click on your **user** icon on the top right corner, and choose **Change User Role**.
2. Select **Admin** and **Change User Role**

Create a developer instance

1. From https://developer.servicenow.com/dev.do#!/home
2. Select **Start Building**.*

   Note #1: it may take a few minutes to fully provision the environment.
   You'll be redirected to a page that looks like this https://dev261120.service-now.com/now/nav/ui/classic/params/target/ui_page.do%3Fsys_id%3D43fe7b6b83070210888759d0deaad3ed

   Note #2: if the latest version (e.g. Washington) isn't available, you can set one up in a previous version (e.g. Vancouver) and update it to the latest version.

Install the Knowledge API

1. In the left hand navigation, under **Filter**, type `Plugins` and go the **Plugins** menu.
2. In **Search your licensed applications and plugins**, search for `Knowledge API`.
3. Enter **Knowledge API**
4. **Install**

Create a Service Account

1. In the left hand navigation, under **Filter**, type `Users` and go the **Users** menu.
2. Select **New**
3. Give is a **User ID**: `CopilotStudioServiceAccount`
4. Check **Web service access only**
5. **Submit**
6. **Enter** the newly created user account.
7. Select **Set Password**
8. **Generate**
9. **Copy** the created password.
10. Under **Roles**, select **Edit**
11. Select the **knowledge** and **incident_manager** role.
12. **Save**

© 2024 Microsoft Corporation. All rights reserved.

Update Lab 3 instructions

Update the:

- **Instance URL** (e.g. `https://dev261120.service-now.com`),
- **User ID** (e.g. `CopilotStudioServiceAccount`),
- **Password**

In the **lab 3 instructions**.

Create a custom copilot

Your Copilot Studio environment should provision at least **one** custom copilot so that all Copilot Studio backend services are provisioned and running.

Deploy the finished copilot solution

To show the finished product, you may deploy the solution containing a completed copilot, after following all instructions.

1. Go to https://make.powerapps.com/
2. Navigate to **Solutions**
3. Select **Import solution**
4. Choose **Browse** and select CopilotStudioWorkshopCompleteCopilot_1_0_0_x.zip
   Note: the solution isn't managed so that you can make edits to the copilot. E.g.:
   a. *Change from Generative AI to classic for intent detection.*
   b. *Updated the SharePoint URL*
   c. *Update the Dataverse configuration*
5. **Select** next and **Import**.

© 2024 Microsoft Corporation. All rights reserved.

Important notes before running the workshop

Make sure the ServiceNow instance isn't hibernating

ServiceNow developer environment stay up only for a short period of time and automatically hibernate.
Make sure the instance is up and running before students start lab 3.

1. **Log** into https://developer.servicenow.com/
2. Check that the instance is **available**, or **wake it up**.

Run the full lab and update instructions

It is also recommended that you use one of the fictitious users credentials to fully run the labs and make sure no update is required for the instructions and setup.

1. In a new session or InPrivate session, **log in** with one the fictitious users credentials to https://aka.ms/CopilotStudioStart.
2. **Follow** all lab instructions.

Create admin accounts for other proctors

If you're running the workshop in your trial tenant environment, consider creating admin accounts for the other proctors, so they may also have access to the attendees copilots and help with any troubleshooting.

1. **Navigate** to https://admin.microsoft.com/Adminportal/Home#/users
2. Select **Add a user**
3. **Fill out** the required information
4. In **Optional settings**, choose **Admin center access**, and select **Global Administrator**.
5. **Share** the credentials with the proctor.
6. Select **Next** and **Finish adding**.
